A: You can access the BIOS from Windows 7 and Windows 8 during startup and shut down. When you start your computer, and press DEL key, it will go to the BIOS screen and you can see your motherboard properties, the boot settings, etc. From a picture - you will have to search online to see how you can get to the BIOS screen. Q: How to use constructors in a class that extends ArrayList? I was looking through a lot of code and I noticed that in some classes there is a constructor that extends ArrayList. I wondered how to do this in an easy to understand way. So I write my class like the one below, but my compiler always tells me "no suitable constructor found in MyList". private ArrayList strings = new ArrayList(); private StringList(String a){ strings.add(a); } What is the correct way to do this? A: You have to specify constructor without parameter to call default constructor of parent class (ArrayList). You can add String to ArrayList by code: ArrayList strings = new ArrayList(); strings.add("String"); Or by using constructor with array as argument ArrayList strings = new ArrayList(); ArrayList
